

Emerging Technologies Showcase CFP

What emerging technologies are changing or will change the way people learn?

The Emerging Technologies Showcase invites AECT members to share their work and experiences during the 2018 Convention in Kansas City 2018.

The concept of “emerging” is an elusive one, especially because the very nature of the word implies a constant newness or a process of coming into being with a goal of often becoming popular. The understanding of emerging technologies as used in this proposal aligns with is of “tools, concepts, innovations, and advancements utilized in diverse educational settings to serve varied education-related purposes” (Veletsianos 2010, p. 17).

As members of an expansive network of learners, educators, designers and consumers of technology, charged with promoting “the effective design and use of technologies in the teaching/learning process, worldwide,” our understanding of adoption and adaption of technologies are assets, especially given the varied ways we interrogate and integrate technologies.

This interactive showcase invites proposals that share experiences with the latest tools or novel use of old technologies for learning and teaching. Ensure that you address the following questions in your submission:

- *What emerging technology would you like to showcase?*
- *What is the innovative use of the technology?*
- *What are the impacts or possible impact of this technology in our field?*
- *What are the potentials and limitations of this emerging technology to the field of Educational Technology?*
- *How is your technology impacting/changing education (learners, institutions, society)? How might it?*
- *Who is leading the introduction, deployment, utilization of this technology?*

This year, participants are welcomed and encouraged to collaborate with vendors of their favorite tools. We welcome proposals that are *works in progress* as well as proposal that present findings of empirical research addressing the conference theme: Leading Learning for Change.
